What New for SISS with the PS Tools 8.53 Upgrade?

**Tangerine Style Sheet and Branding**

Use new Tangerine style sheet and rebranded the top level ribbon to conform to the Duke Standard branding guidelines.

**Old Style Sheet and Logo:**

**Breadcrumbs Navigation Feature**

A breadcrumb trail indicates where the user is within the application from a hierarchical perspective. In addition, users can click a specific breadcrumb link to instantly view the page. The highest level for the breadcrumbs originates at the Main Menu. Therefore, we made the decision to give this feature to administrative users only. Please contact siss-security@duke.edu if you feel the breadcrumbs navigation feature would be a benefit to you.
Type Ahead/Auto Complete Feature

Testers have given this mixed reviews... while it can be a real time-saver for certain types of data entry, others found it to be disruptive to the way they search and enter data. In order to make it available for those who like the functionality, we enabled it for administrative users, but we set the default value to “no.” Please note this feature is only available on prompt lookup fields (with the “magnifying glass” icon).

In order to change your default to “yes,” go to the bottom of the main menu and click on “My Personalizations”:

Select “Personalize Navigation Personalizations”:
Go to “Autocomplete” and set the override value to “Yes”, click OK and you are done.

Feel free to experiment with other personalizations, but if you do, please note what you’ve changed and be aware that sometimes it will change the behavior of the interface in ways you may not expect, so if you run into something odd, it would be a good idea for you to test restoring your default personalizations to be sure you haven’t inadvertently caused your own issue. Beware the accessibility features in particular!
